April 12th 2011

Fast Girl Films, in association with Stonehenge Productions, announces the release of a FilmApp for the hit lesbian film “And Then Came Lola”, for iPhone / iPod touch / iPad. Now available in iTunes App Stores worldwide.

FAST GIRL FILMS TRIES TO COMBAT PIRACY & REACH WORLDWIDE AUDIENCES

Premiering at the San Francisco’s Frameline LGBT Festival in June 2009, *And Then Came Lola* is a “time-bending, sexy, lesbian romp, with an irreverent nod to the popular art-house classic ‘Run, Lola, Run’. This free app, packed with sexy cast photos, behind the scenes extras, and other goodies, also has an in-app option to purchase the film.

For co-directors Ellen Seidler and Megan Siler, the release of an iPhone / iPad / iPod touch FilmApp for *And Then Came Lola* provides a much needed outlet for independent international distribution. While the film is available for sale in iTunes stores in the UK and the US, most international iTunes stores do not offer movie downloads. They say, “Our film, unfortunately, has been pirated in almost every country and every language. This has really undercut our ability to recover financially and to make another film.” However, many would-be audiences do not actually have a legal way to see *And Then Came Lola*.

The *And Then Came Lola* FilmApp, which was created by Stonehenge Productions, gives Fast Girl Films an excellent opportunity to provide worldwide audiences with a legal means to purchase the film, and also provides fans with loads of exciting free content!

“And Then Came Lola” FilmApp now available in iTunes App Stores worldwide!
